ABSTRACT

AN ANNOTATED BIBLIOGRAPHY IS THE THIRD CONCLUDING PORTION OF THIS THREE-PART PROGRESS REPORT ON IPI. PART I DOCUMENTS PROGRESS AND FINDINGS UP TO SEPTEMBER 1969 WITH THE AID OF A FLOW CHART OF THE SYSTEM, A TABLE OF BEHAVIORAL OBJECTIVES FOR THE MATHEMATICS CONTINUUM 1969-70, A BRIEF HISTORICAL TABLE (1954-66) OF PROGRESS FROM RESEARCH TO IPI THROUGH FEDERAL SUPPORT, MODELS FOR EVALUATION OF IPI AND FOR ITS WIDE-SCALE ADOPTION; A MAP SHOWING THE NUMBER OF IPI SCHOOLS BY STATE (1960-70), TABLES SHOWING MATH FIELD PARTICIPATING SCHOOLS BY YEAR AND ELEMENTARY SCHOOL DEVELOPMENTAL EFFORTS. IPI RESULTS OF WORK TO DATE ARE RECORDED ACCORDING TO HOW IPI AFFECTS PUPIL ACHIEVEMENT AND ATTITUDES, TEACHER ATTITUDES AND CHANGES, AND ADMINISTRATORS. A DESCRIPTION OF IPI AS A DEVELOPMENTAL INSTRUCTIONAL SYSTEM CONCLUDES THIS PART OF THE REPORT. THE SECOND PART IS CONCERNED WITH FORMATIVE AND INTERIM SUMMATIVE EVALUATIONS. IN THE FORMATIVE EVALUATION ACTIVITIES ARE CLASSIFIED AS PUPIL-ORIENTED, PERSONNEL-ORIENTED, OR SYSTEM-ORIENTED, AND UNDER EACH CLASSIFICATION ARE DETAILS CONCERNING AUTHORS, TITLES AND DATES OF PUBLISHED INVESTIGATIONS, THE POPULATIONS AND INSTRUMENTS THAT CONTRIBUTED TO THE RESEARCHES, AND THEIR DESCRIPTIONS AND RESULTS. THE INTERIM SUMMATIVE EVALUATION PROCEEDS IN LIKE MANNER. (GO)

ACKNOWLEDGEMENTS

The Board of Research for Better Schools, Inc.

For having enough wisdom to select IPI and protect the staff for development time.

The Staff of Research for Better Schools, Inc.

Without which program and evaluation would be impossible.

Learning Research & Development Center — University of Pittsburgh

For researching, inventing, and having infinite patience with mavericks.

The Participating Schools and Teachers

Who are willing to be pioneers in searching for new frontiers for children and also demonstrate a willingness to change if somebody will help.

The Participating Pupils

Who are our richest investment.

The Cooperating Regional Laboratories

Who proved that professionals can work in the best interest of children in a national network.

The U. S. Office of Education — Division of Educational Laboratories' Staff

For understanding, encouraging, funding and believing.

FOREWORD

The work of Research for Better Schools, Inc. has been supported by many individuals and organizations. It is recognized that not every person has been in accord with the approaches taken by RBS in moving toward the wide-scale adoption of Individually Prescribed Instruction. Battles of cost reduction, improvements to the system, resolutions of problems, and the maintenance of a critical mass of resources in personnel and money have not been easy. At RBS the prevailing attitude is that 'our work is fraught with opportunity.'

No final answers are available on the total worth of Individually Prescribed Instruction, as one means of providing individual learning for children. The tone of this report of progress, hopefully, reflects some major promise, but this should not be construed to mean that RBS has suddenly found some magical formula for solving the educational problems of learners.

Also, it should be clearly understood that our work to date is far from complete. The corporate goal of designing an entirely new elementary school program with relevancy for all learners by 1975 is uppermost in our thinking. To reach this broad goal will demand new insights, more research, major dollars, and the necessary management skills that make it possible to bring together the consortium of critical masses of highly competent personnel.

Since nobody can prescribe the best method of reporting progress for a variety of audiences which includes superintendents, school boards, teachers, parents, researchers, and many others — RBS has taken the liberty of describing progress in a new format.

The progress report is divided into three major parts. Part I deals with the chief progress and findings of IPI to date, Part II reviews in abstract format some fifty studies, and Part III presents a comprehensive annotated bibliography — carefully indexed — of the studies which have been completed at the time of this writing.

Each reader is urged not to use any one datum as a means for acclaiming or disclaiming the total instructional system of IPI. If the RBS method of constant revision for the improvement of education is successful, no results will ever be final. After all, the purpose of data feedback is to provide useful information for the continuing improvement of education in a systematic way.

We, at RBS, would appreciate any comments you may have concerning the progress report, both in terms of format and content.

James W. Becker
Executive Director

August 1969

PART I.

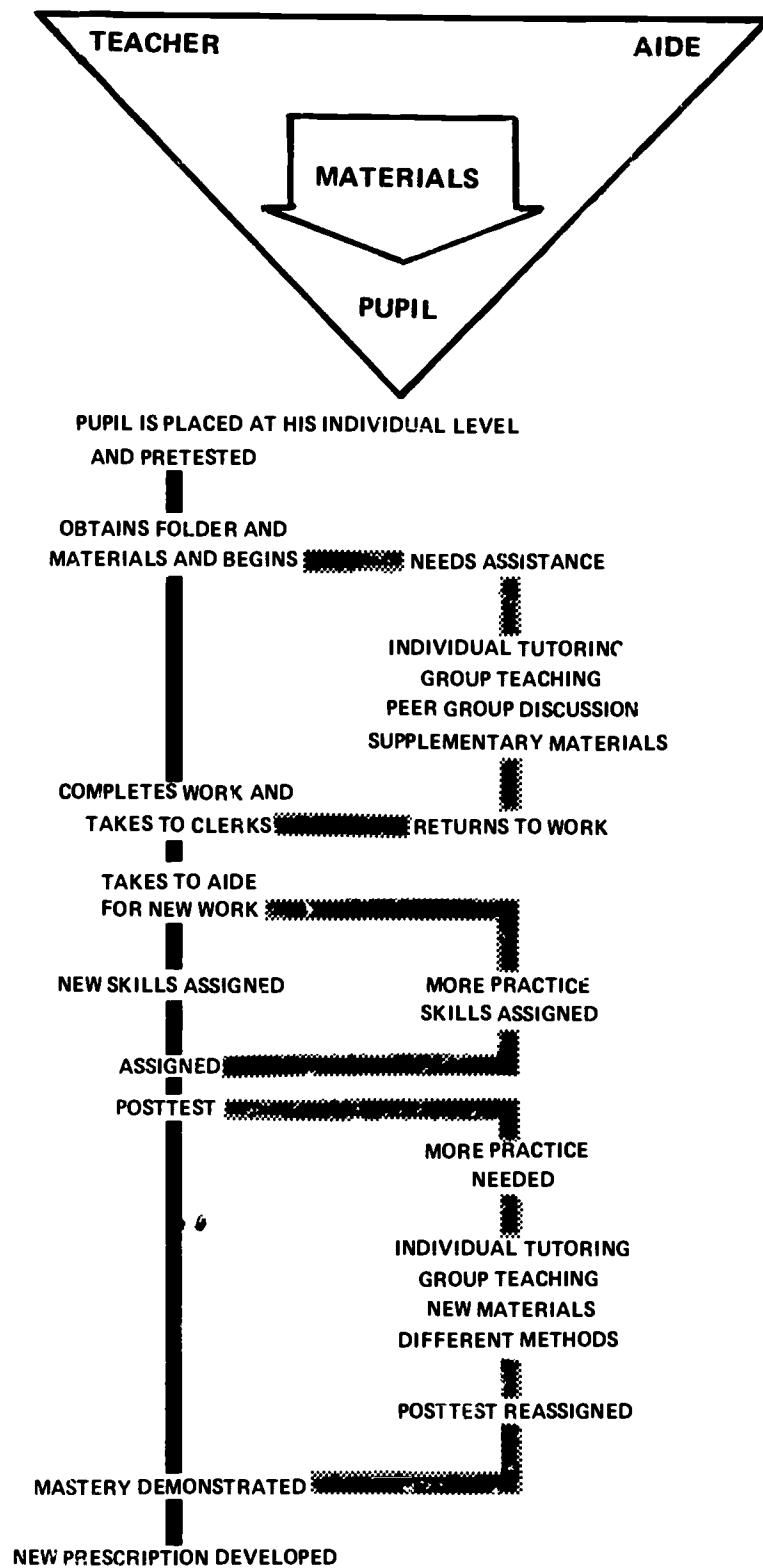

PROGRESS AND FINDINGS TO DATE

INDIVIDUALLY PRESCRIBED INSTRUCTION (IPI) IS ONE METHOD OF PROVIDING FOR INDIVIDUALIZED INSTRUCTION

IPI IS AN INSTRUCTIONAL SYSTEM THAT INCLUDES:

- Placement tests and a prescription technology designed to place learners into their own properly tailored instructional content.
- Pretests to determine what the learner already knows about the content being taught.
- Instructional materials built around specified objectives for the content being taught.
- Checkpoints in the curriculum to guide the learner in measuring his individual progress.
- Posttests to measure the overall mastery of a unit of instruction.
- A management system for teachers.
- Training programs in the use of the instructional and management system for administrators, teachers, and teacher aides.
- A monitoring and data feedback network designed to improve the instructional and management system.

A FLOW OF THE IPI SYSTEM

FROM RESEARCH TO IPI THROUGH FEDERAL SUPPORT

EXPERIMENTAL RESEARCH

Individual
Researchers

Typical Efforts:

- Programmed Instruction
- Rate of Learning
- Pacing
- Individual Differences

RESEARCH & DEVELOPMENT

Learning Research &
Development Center
Funded by U.S.O.E.

Typical Efforts:

- Synthesize Knowledge
- Develop Model for Individualization
- Create Experimental School
- Oakleaf (IPI) Started

DEVELOPMENT & DISTRIBUTION

Research for Better
Schools, Inc.
Funded by U.S.O.E.

Typical Efforts:

- Select IPI as Major Program
- Develop Training Systems
- Develop Feedback Loop
- Develop Wide-Scale Adoption System

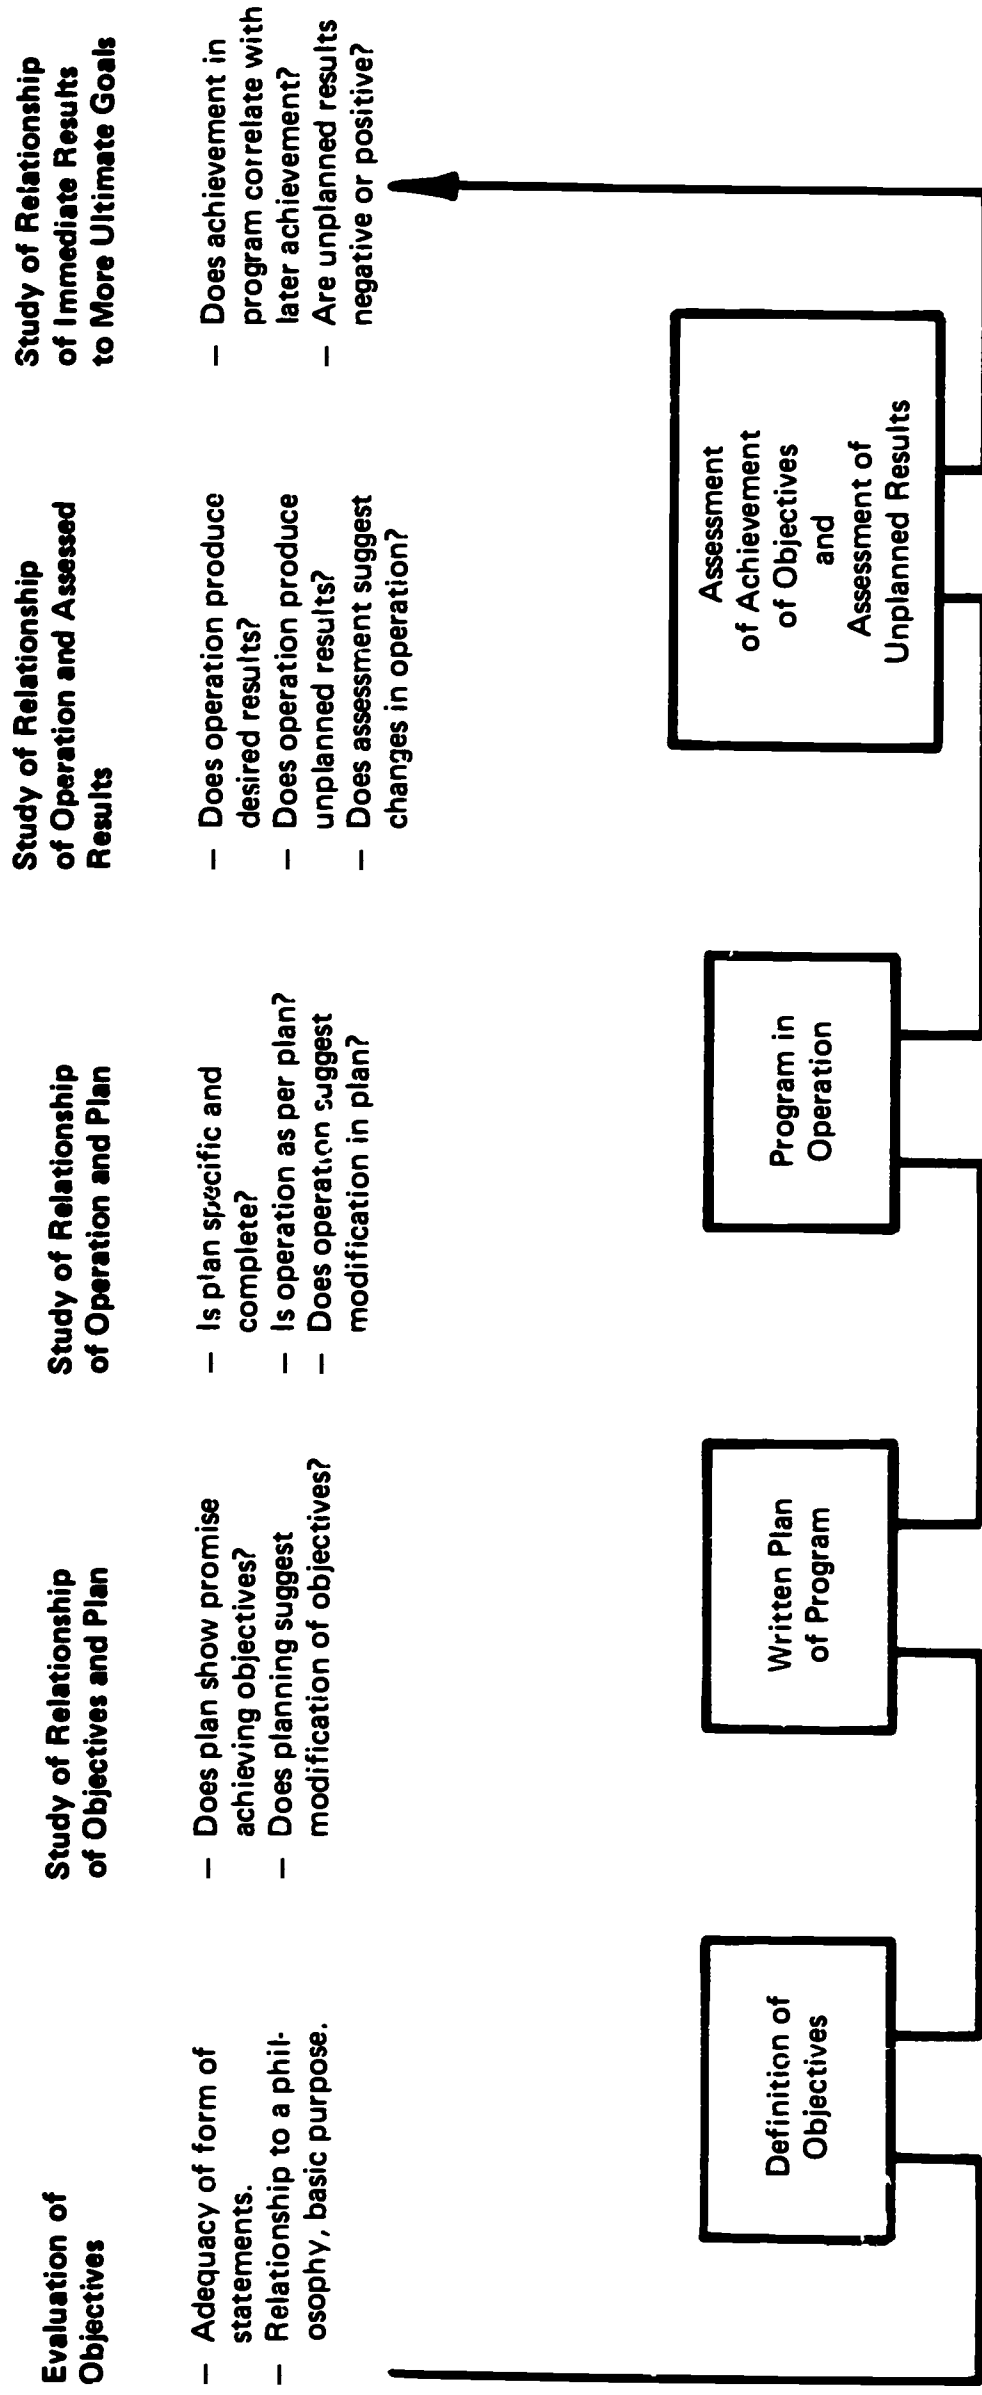

APPLICATION

Learners and
Target Populations

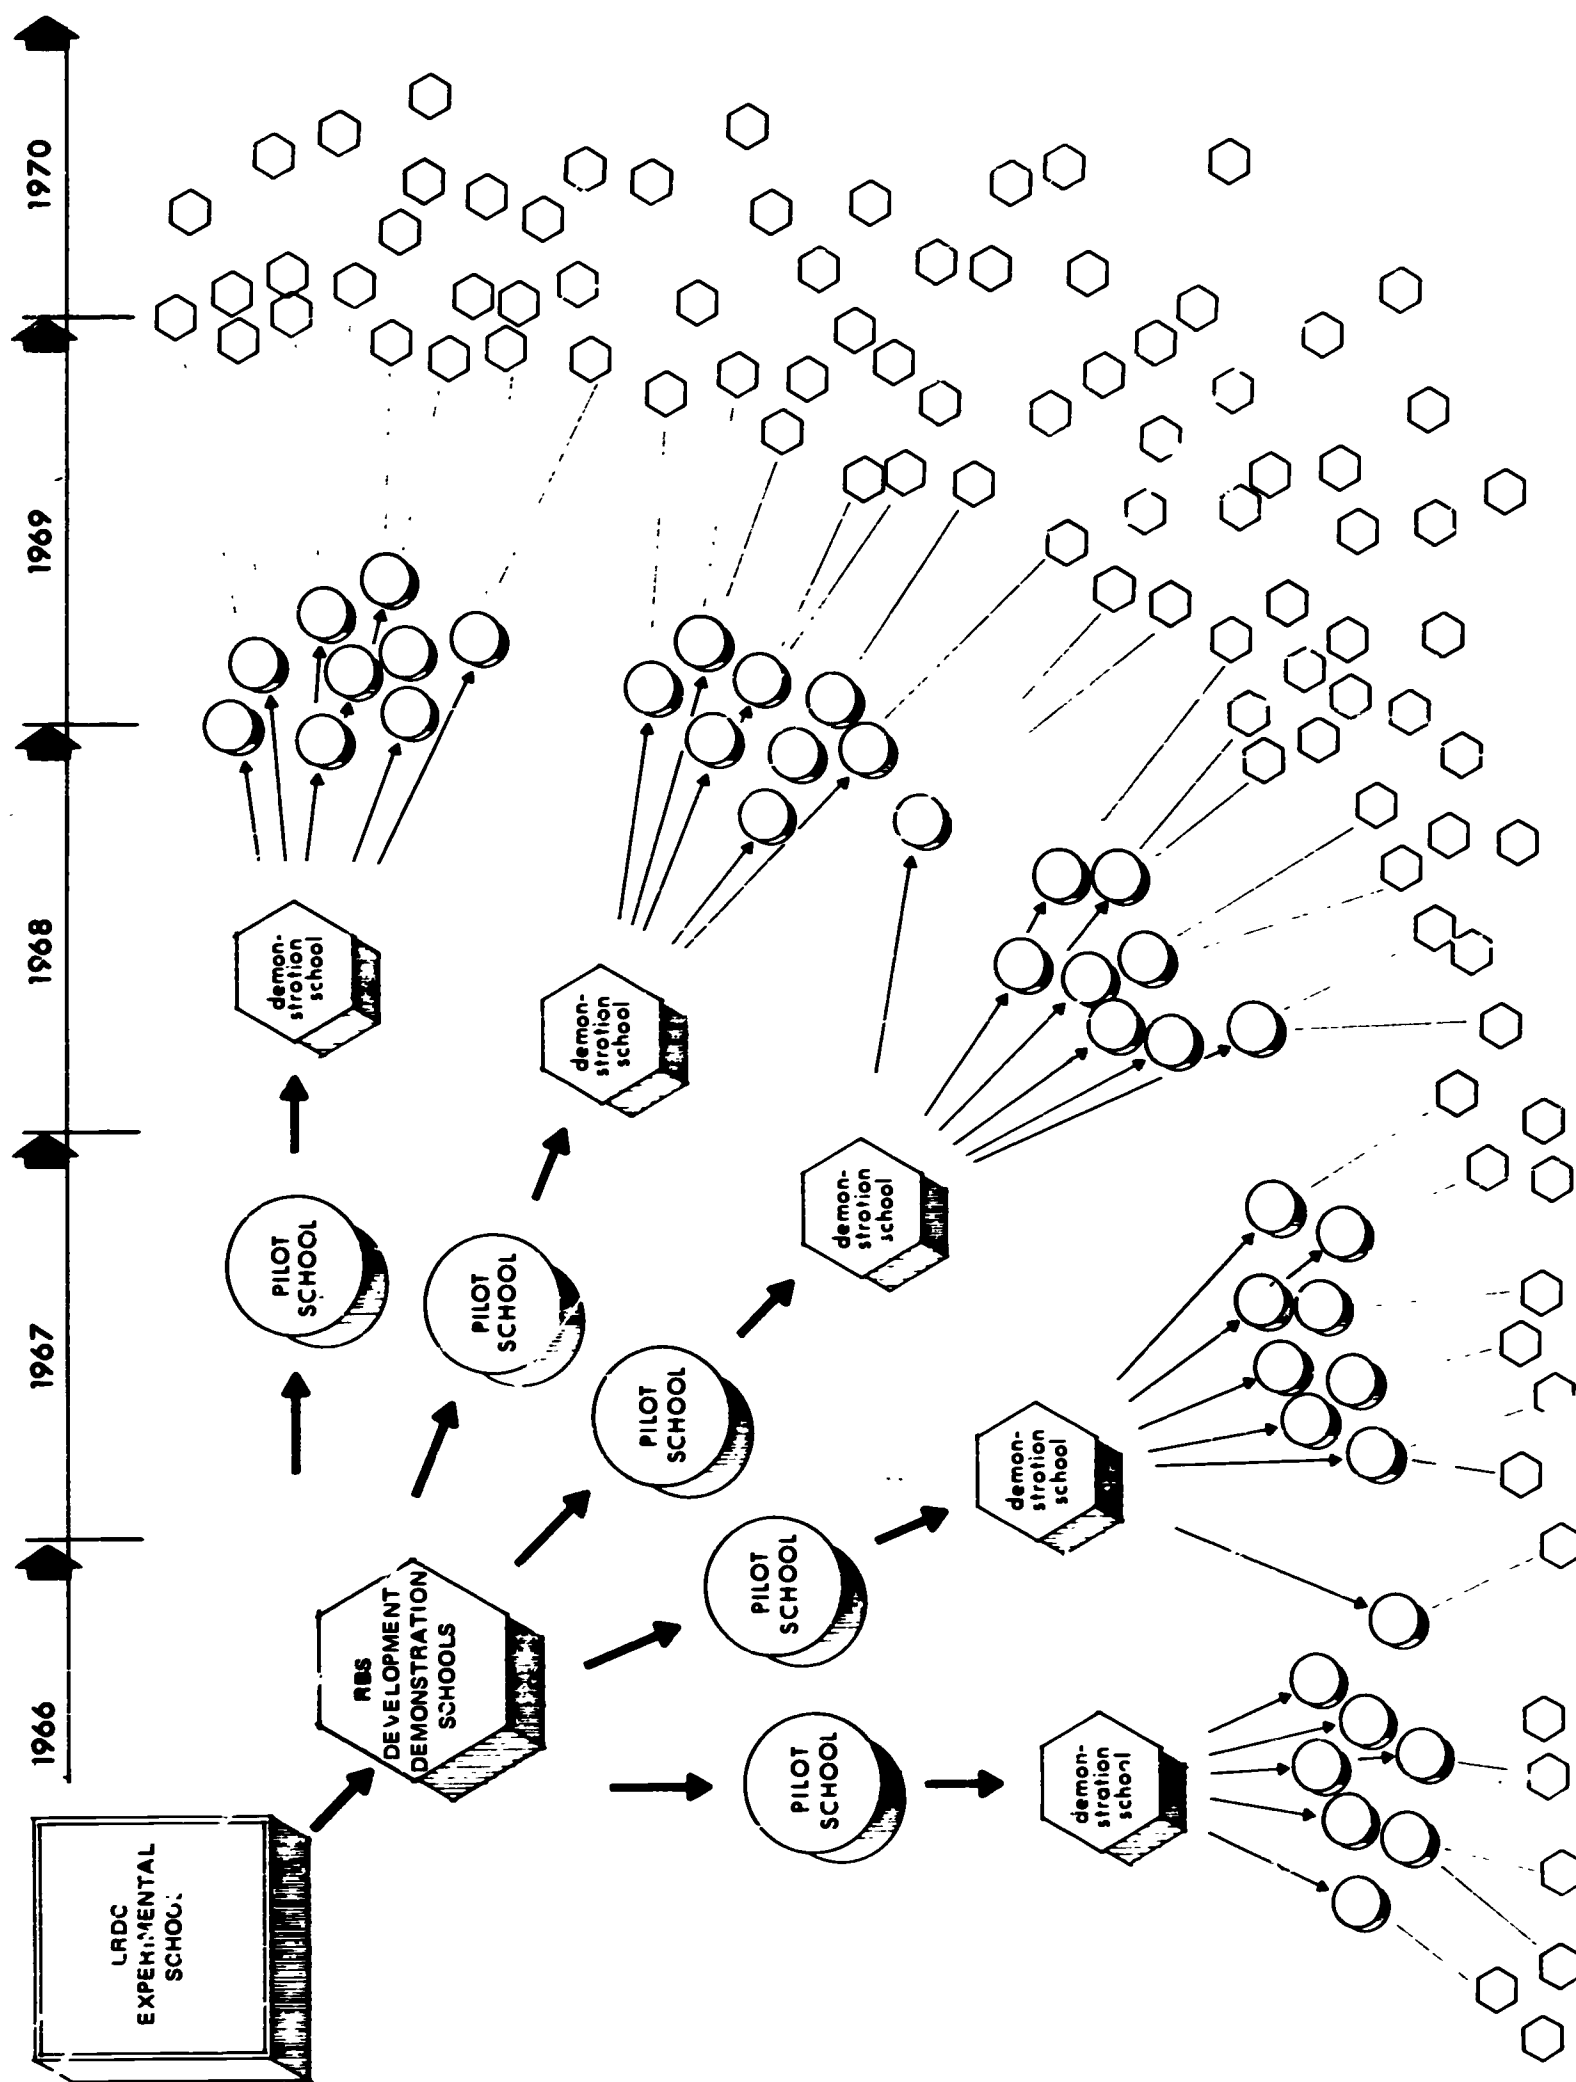

Typical Efforts:

- Instructional Systems –
- Mathematics
 - Reading
 - Spelling
 - Handwriting
 - Science

ELEMENTARY SCHOOL DEVELOPMENTAL EFFORTS

IPI RESULTS OF WORK TO DATE

The following highlights, general in nature, present some of the changes and results of our work to date. Such a summary affords the reader a thumb-nail sketch but not a detailed accounting. Most of the results and changes deal with the IPI mathematics instructional system.

▲ Pupil Achievement

- On standard achievement tests IPI pupils do as well as non-IPI pupils.
- Some statistical differences on standard achievement tests are occurring in favor of IPI pupils in special education and reform schools.
- Standard achievement tests do not adequately measure the IPI program since many of the IPI skills are not tested by standard normative referenced achievement tests (less than 30%).
- There is need for new test construction designed as criterion referenced tests as opposed to normative referenced tests.
- On IPI placement tests the IPI pupils score significantly higher statistically than do the non-IPI pupils.
- IPI does indeed provide for individualization for the learner by removing the ceiling for the learner. Scores and rate of progress for IPI pupils are statistically greater than those for the non-IPI pupils.
- Girls achieve at a higher rate than do boys in the IPI schools.

▲ Pupil Attitudes

- Based on interview data, IPI pupils like school better than non-IPI pupils.
- IPI pupils like math better than non-IPI pupils.
- One school, ghetto in nature, has reduced police contacts from an average of 137 per year to an average of one per year. Broken windows, once a serious problem, have all but disappeared as a source of concern.

▲ **Teacher Attitudes and Changes**

- Surveys conducted over the past three years indicate that teachers are highly positive about the IPI program.
- Teachers are working harder in IPI than they would in other programs but obtain greater satisfaction since they can meet the challenge of individual differences for each pupil.
- Teachers, in spite of all their critics, are willing to make significant changes in teaching for children if somebody is prepared to offer a program with specific direction and help.
- Teachers become diagnosticians of learning instead of dispensers of information.
- Teachers provide valuable feedback information for program changes.
- Teachers are taught to use the instructional system in a short period of time.
- Teachers use data to correct their writing of prescriptions.
- Substitute teachers can, with little training, manage the system of IPI, thus providing for a continuity.

▲ **Administrators**

- The principal can be taught to use the system and in turn become the teacher and instructional leader for his own staff of teachers.
- New roles are created for the principal as an instructional leader.
- The principal uses data to manage the instructional system.

▲ IPI as a Developmental Instructional System

- Participating schools can be selected on the basis of specified criteria including administrative commitment, teacher commitment, retraining, and research participation.
- The RBS developmental model of moving from an experimental school to demonstration-developmental schools to wide-scale field testing schools can be managed with a data feedback system designed to measure the extent of implementation and pupil progress.
- It is possible to implement IPI on a national scale by collecting data to measure implementation which in turn can be used to monitor and correct mistakes.
- Feedback information can be used from field data to improve classroom management and the instructional system.
- As a result of developmental data the instructional system has had three major revisions. For example:

| | |
|-------------|--|
| 1966 – 1967 | Single sheet approach |
| 1967 – 1968 | 50% change and booklets adopted |
| 1968 – 1969 | Training and management system changes |
| 1969 – 1970 | Testing revised system |
- Objectives, as a result of feedback data, have been reduced from over 540 in 1966 to 390 for 1969.
- Costs for instructional materials have followed a decreasing pattern from:

| | |
|-------------|------|
| 1966 – 1967 | \$42 |
| 1967 – 1968 | \$18 |
| 1968 – 1969 | \$16 |
| 1969 – 1970 | \$12 |

Further reductions making the system cost feasible for schools is fast approaching reality.

- The technology developed from IPI has broad applications for the development of individualized instructional systems.
- It is possible to go from research to practice if you have a sufficiently broad base. The individual research through the 1950's made IPI possible.
- The computer is becoming a more critical tool in individualizing learning. Primitive though the methods may be, the computer as a tool for both teacher and pupil is essential.
- The results of the assessment of the degree of implementation of IPI in participating schools show that the instructional system can be successfully implemented.
- Students in IPI do not always work in isolation. There is a 28% variation in the use of instructional settings.

PART II.

FORMATIVE AND INTERIM SUMMATIVE EVALUATIONS

FORMATIVE & INTERIM SUMMATIVE EVALUATIONS

The evaluation of any new program is extremely difficult. At times the instruments necessary for evaluation are non-existent and have to be invented; also, the evaluation of any new program cannot be treated in the same manner as experimental research in that changes, many times dependent upon observations and value judgments, have to be made to correct identified weaknesses of the new program being evaluated.

IPI, as an instructional system, does not escape any of the above problems. To date over 110 studies have been generated. Approximately fifty of these studies have been selected and presented in Part II in summary form. Descriptive studies about the instructional system have not been included in this section but can be found in Part III — **An Annotated Bibliography**..

It should be further noted that the data do not always agree. Such phenomena are not rare in educational research and evaluation. Evaluators, like all other humans, tend to agree to disagree. When value judgments have to be made disagreements are bound to arise.

Part II presents formative and interim summative evaluations which have been highlighted from on-going and completed studies — all of which are listed in Part III.

No attempt has been made to deal with the composite results of Part II. In a sense this is an experiment on the part of RBS in presenting what are believed to be the relevant facts concerning author, title, date, population, instruments, description, and results. The truth is that nobody knows exactly what the best form is in presenting such findings. It is hoped that this approach provides reader ease, as well as direct communication in a concise, meaningful manner.

A brief description of formative and summative evaluations is presented, followed by the data to date.

FORMATIVE EVALUATION

Formative evaluation refers to studies that are used to improve or help in the formation of a program. Often formative studies are internal studies concerned with variables within the program itself. Comparisons with other instructional systems need not necessarily be conducted; although such comparisons can be used to help in the development of a program. The way in which the results are used, rather than the content of the study, determines whether it is formative or not.

The formative studies presented in this section of the report have been sub-divided into categories of pupil-oriented, person-oriented, and system-oriented activities. In addition several studies being completed during 1969 are included.

INTERIM SUMMATIVE EVALUATION

Following the formative evaluations are procedures designed to make interim summary assessments of the overall value of an educational program. These procedures include collecting data on planned and unplanned effects as well as the need for value judgments concerning the worth of the results achieved. Eventually summative evaluation should be able to lead to statements such as, 'If this instructional system is implemented in this way, within this setting, following these conditions, the following results should occur.' The interim summative studies presented in this section of the report deal with achievement, side effects on pupils, and classroom observations.

FORMATIVE EVALUATION

PUPIL-ORIENTED ACTIVITIES

| AUTHOR, TITLE & DATE | POPULATION | INSTRUMENTS | DESCRIPTION | RESULTS |
|--|---|--|--|---|
| Bolvin - Variability of Pupil Achievement in Mathematics Feb. 1966 | Oakleaf, before and after the introduction of IPI | <ul style="list-style-type: none"> - IPI tests - Metropolitan Achievement Test | <p>IPI tests are given at the beginning and end of the first year of IPI and the results in units mastered are compared by grade.</p> <p>Variability data is also obtained on the Metropolitan at the beginning of the year.</p> | <p>In grades 1, 4, 5 and 6, variability in achievement after a year of IPI was no greater than in standard graded instruction.</p> <p>Variability on the Metropolitan showed a general increase with number of years in school.</p> |
| Boozar - Evaluation of Variability Among Students in Total Number of Units Mastered per Year. Summer 1968 | Oakleaf pupils 1967-68 | IPI tests for units in which work was done. | 1967-68 variability data for each grade at Oakleaf is compiled utilizing the Pitt time-sharing computer terminal system. | <p>Variability in pupil achievement occurs in both math and reading. Variability is greater at the higher grade levels. The time-sharing system can be utilized to conduct small data analyses such as these quickly.</p> |
| Cox, et. al. - Description and Evaluation of the First Two Years of IPI Ch. V: Pupil Achievement Dec. 1966 | Oakleaf School pupils 1964-66 | <p>IPI tests</p> <p>Prescription data</p> <p>IPI tests</p> <p>Prescription data</p> <p>California test of Mental Maturity</p> <p>Metropolitan Achievement Test</p> | <p>Variability and rate of achievement (ratio of pages to days up to the first posttest) in Math, Reading and Science units.</p> <p>Correlation of math and reading rates with selected variables.</p> | <p>Great variability between units and large individual differences within units. Middle math levels (C-E) take the most pages and days to mastery; higher reading levels take the most pages and days to mastery.</p> <p>Significant correlations (positive and negative) were found between:</p> <ul style="list-style-type: none"> - math and reading rates - math/reading rates and IQ - math rate and Metropolitan math achievement score - first math posttest and days in math - pages in math - IQ - post and present Metropolitan Reading and Math test scores. |

PUPIL-ORIENTED ACTIVITIES (Continued)

| AUTHOR, TITLE & DATE | POPULATION | INSTRUMENTS | DESCRIPTION | RESULTS |
|---|---|--|---|--|
| Lipson - Transfer and Generalization in IPI Feb. 1966 | Oakleaf students 1964-66 | IPI continuum | Use of transfer instances (those cases in which the student has received instruction in prerequisite skills, and then shows mastery on advanced dependent skills) as a comparative measure of transfer. | Probability of transfer increases as the student's background in arithmetic increases. Addition and Subtraction show greater probability of transfer than do Multiplication and Division. The percentage of students in a class showing transfer behavior increases linearly by grade. |
| Scanlon - Self-Initiated Activities in an Individualized Program - 1966 | Oakleaf 5th and 6th grade students and teachers | <ul style="list-style-type: none"> - Measure of self-initiated behavior - Measure of student interest - Measure of peer-group evaluation of initiation - Student interviews - California Test of Mental Maturity - Metropolitan Achievement Test | <p>Three treatments, introduced one per month, were used over a four-month period.</p> <p>Treatment #1 was designed to create awareness and use of supplementary materials.</p> <p>Treatment #2 provided opportunities to explore special interest areas.</p> <p>Treatment #3 was designed to capitalize on special interests and to structure opportunities for teachers and peers to praise exceptional work.</p> | <p>Self-initiation can be improved by providing special techniques during class periods. There is little relation between self-initiation and IQ achievement or sex of student.</p> <p>Student interest in math did not increase after self-initiation treatments, nor was there any significant change in peer evaluation of self-initiation.</p> <p>Interviews showed that pupils wanted to continue the treatments, and believed these provided them the chance to work on their own, teach themselves and go at their own speed.</p> |

|--|--|---|--|--|----------------------------|--|--|--|---------|-------|---------------------------|-----|-----|-------------------|----|-----|-------------|-----|-----|-------|----|-----|--|-----|-----|
| Yeager, Lindvall - An Exploratory Investigation of Selected Measures of Rate of Learning Winter 1967 | Oakleaf pupils 1967-68 | California Test of Mental Maturity (1st and 2nd grades) Otis Quick Scoring Test of Mental Ability (Grades 3-6) | Exploration of three possible measures of rate of learning that could be employed in individualized learning programs using IQ as a predictor of: 1) number of units completed per year; 2) time to complete given units; and 3) amount of content mastered per day. | There is no correlation between IQ and actual rate of progress in IPI, although there is a significant correlation for all grades between IQ and level of attainment prior to beginning IPI (as measured by Placement Testing). Correlation on the other two measures of rates of learning are generally non-significant, leading to the conclusion that rate of learning is not a general characteristic of the learner but rather is specific to the particular learning task. | | | | | | | | | | | | | | | | | | | | | |
| Yeager, Lindvall - Evaluation an Instructional Innovation through the Observation of Pupil Activities - 1968 | Oakleaf, one other IPI school | Structured Observation Guide | Observers observed, at two-minute intervals over entire class period, and made a tally for each student, showing the specific activities in which he was engaged. | <table><thead><tr><th>Major Category of Activity</th><th colspan="2">Mean % of Students Engaged in Activity</th></tr><tr><th></th><th>Oakleaf</th><th>Other</th></tr></thead><tbody><tr><td>Independent Teacher-pupil</td><td>61%</td><td>42%</td></tr><tr><td>Non-instructional</td><td>8%</td><td>12%</td></tr><tr><td>Pupil-pupil</td><td>29%</td><td>42%</td></tr><tr><td>Group</td><td>2%</td><td>.2%</td></tr><tr><td></td><td>.0%</td><td>.0%</td></tr></tbody></table> | Major Category of Activity | Mean % of Students Engaged in Activity | | | Oakleaf | Other | Independent Teacher-pupil | 61% | 42% | Non-instructional | 8% | 12% | Pupil-pupil | 29% | 42% | Group | 2% | .2% | | .0% | .0% |

PERSONNEL-ORIENTED ACTIVITIES

| AUTHOR, TITLE & DATE | POPULATION | INSTRUMENTS | DESCRIPTION | RESULTS |
|--|---|---------------------|--|--|
| Bolvin - Evaluating Teacher Functions - Feb. 1967 | Oakleaf teachers in the first two years of IPI. | Prescription sheets | Teachers' prescriptions were reviewed and length and types of prescriptions tabulated. The analysis of type seems to be largely subjective. | Two patterns of prescribing were identified. Prescription practices seem to be limited by the curriculum materials and student information readily available to the teacher. Some changes in practices were observed over the two years. |
| Cox, et. al. - Description and Evaluation of the First Two Years of IPI Ch. VIII: Prescription Writing | Oakleaf teachers 1964-66 | Prescription sheets | Study of prescription writing practices. | Certain teachers tend to develop a few set patterns of prescription writing which fail to take actual pupil performance into account. |
| Ch. IX: Non-Cognitive Variables - Dec. 1966 | | Interviews | Teacher attitudes and recommendations. | All teachers were in favor of individualization of instruction, and felt that it fostered pupil interest, self-motivation and independence. Major problem is the handling of the slow child. They found the initial adjustment to teaching IPI difficult, but felt it made for more efficient utilization of their time. |
| Dudley, et. al. CASEA - The Decision-Making Structure of Schools Feb. 1969 | 3 IPI schools 3 Control schools 3 Multi-unit for Project Models (Wisc.) 3 Multi-unit Control Schools for Project Models (Wisc.) 6 Wash. (state) Schools | Questionnaire | To determine the decision-making process of schools and the teacher perceptions of the authority structures, the following questions were asked: - What positions had primary responsibility for making decisions? - What is the nature of the relationship of people involved in each decision? | Variability within types of schools (control, multi-unit and IPI): - Control: teachers see themselves as decision makers with the principal as a consultant. - Multi-unit: decisions are made in committees, not by individual teachers but each school had different authority structure. - IPI: no clear, consistent pattern with a trend toward a prescription type of authority relationship. |

| Stehr, et. al. CASEA - Task Differentiation in Elementary Schools: An Exploratory Analysis Feb. 1969 | 3 IPI schools 3 Control schools 3 Multi-unit schools for Project Models (Wisc.) 3 Multi-unit control schools for Project Models (Wisc.) 6 Washington (state) schools | Organization task instrument | The instrument was designed to elicit an extensive job description from each teacher and the ranking of the tasks listed according to their importance and the time it takes to carry them out. | <p>Task area with greatest number of responses:</p> <ul style="list-style-type: none"> — IPI 'management' with 18.4% — IPI control: 'management' with 20.8% — Multi-unit: 'planning' with 22.5% <p>All schools are almost equal on the frequency of 'evaluation'.</p> <p>Organization of the school does not affect the frequency of: guidance, professional advancement, growth, and teacher content areas, meetings, planning, PR, stimulation-motivation, and teacher-instructional activities.</p> <p>Most important tasks were for:</p> <ul style="list-style-type: none"> — IPI management — Multi-unit: evaluation <p>When time is the factor, the following is important for:</p> <ul style="list-style-type: none"> — IPI: evaluation, stimulation-motivation — Multi-unit: guidance <p>TENTATIVE CONCLUSION — IPI schools seem to have a far greater impact on the task structure of teachers than multi-unit schools.</p> |
| Deno, Jenkins — Evaluating Pre-planned Curriculum Objectives 1967 (University of Delaware) | 13 in-service teachers and one principal | IPI Continuum Classification checklist | Purpose of study was to determine whether a technique for analyzing behavioral objectives in terms of critical components (such as specificity of behavior; context and determined criterion of the objective) could be developed and reliably used by a typical group of in-service teachers. | <p>Concluded that nearly every objective sampled from the IPI math continuum may be described as 'a general behavioral objective with neither a signal nor a criterion explicitly stated.'</p> |

| AUTHOR, TITLE & DATE | POPULATION | INSTRUMENTS | DESCRIPTION | RESULTS |
|---|---|---|--|---|
| Scanlon - The Use of Data in School Selection and Training of Administrators Feb. 1969 | Teachers in two new IPI schools | Two school case studies Pre- and posttests in training materials | Field testing and refinements of individualized teacher training materials. | An application for new schools with specified criteria for their selection. |
| IPI administrators (60) | Questionnaire I: (ATP) | Administrative training program was held in the spring of 1968 and attended by 60 principals. | Development of an administrative training program to enable principals to train their staffs. | Response to the training program was quite positive. Administrators ready to train their staffs. |
| Teachers in 70 IPI schools | Teachers' evaluation of training program and materials. Trainer's report of procedures used in training session. Trainer's summary and evaluation report. | Teacher training program held during the summer of 1968. | Teacher and trainer evaluation of the individualized training program and materials was quite positive. Marked cost reduction realized by this new approach to staff training. | |
| RBS - Summary of IPI Teachers' and Administrators' Conference March 1968 | 147 IPI teachers from 25 IPI schools | Workshop reports | 19 workshops were held in which teacher recommendations were made in topic areas. | Most teachers believed workshops were helpful. Specific recommendations were made for: — seminar topics for math and reading — time and structure of planning sessions — classroom management — math and reading readiness activities — teacher evaluation by principals and self-evaluation |

|---|--------------------------------|---------------------------------------|--|---|
| Weinberger (Continued) | | Report of student progress | Compiled from a data bank file of IPI placement and progress information on 15,000 students. | Used to determine the rate, amount and dispersion of academic progress made by individual (and groups of) students. There is wide dispersion within all IPI classes. |
| | | Report of student visitation monitors | Results of periodic visits to the schools by trained observers. | Produces data on the elements involved in implementing IPI in various types of schools. |
| Weinberger - Degree of Implementation of IPI: Spring Results April 1969 | 79 IPI schools 650 teachers | Prescription sheets | Use of diagnostic instruments and mastery criterion. | Pre-, Post- and CETs 85% to 96% correct usage More variability is needed in the use of the techniques. There is variability in length of the first prescription for a skill. |
| Weinberger - Degree of Implementation of IPI: Fall-Spring Comparison April 1969 | 79 IPI schools 650 teachers | Prescription sheets | Use of diagnostic instruments and mastery criterion. | Correct usage of mastery criterion on CETs and posttests increased. |

INTERIM SUMMATIVE EVALUATION

PUPIL ACHIEVEMENT

| AUTHOR, TITLE & DATE | POPULATION | INSTRUMENTS | DESCRIPTION | RESULTS |
|---|---|--|--|--|
| Bialeck and Castro - A Second Year Evaluation of Individually Prescribed Instruction (IPI). Monterey, California, Nov. 1968. | Grades 4-6 in four IPI and four control schools in Monterey area — three IPI schools had math and one had reading. | Iowa Test of Basic Skills | Test was administered in September and May and a 'total arithmetic score' consisting of a combination of the concepts and problem solving was computed. | There is no significant difference between IPI and control; all differences are insignificant or favor the non-IPI groups. |
| | Placement tests | | Tests were administered in September incorrectly and in May. The Lorge-Thorndike Intelligence Scale was used to divide the pupils into three ability groupings. | General superiority of non-IPI. All differences are insignificant or favor the non-IPI groups. |
| Fisher - An Investigation of Three Approaches to the Teaching of Mathematics in the Elementary School, Unpublished doctoral dis- sertation, University of Pittsburgh, 1967. | 420 pupils in five schools with three types of curriculum treatment: — IPI — programmed learning instruction — standard classroom instruction | — Metropolitan Achieve- ment Test: arithmetic computation and arithmetic problem- solving and concepts. — Iowa Test of Basic Skills (ITBS): arithmetic concepts and arithmetic problem solving. | Instruments: — The Metropolitan was used as pretest and posttest of student's arithmetic ability with pre- administration time preceding spring. — The ITBS was administered on an untimed-ungraded basis as a posttest. — The Otis Quick Scoring Mental Ability Test was used as a control variable. | No significant differences between IPI, programmed learning instruction, and standard classroom instruc- tion. |

PUPIL ACHIEVEMENT (Continued)

| AUTHOR, TITLE & DATE | POPULATION | INSTRUMENTS | DESCRIPTION | RESULTS |
|---|--|---------------------------|---|--|
| Gallagher - The Evaluation of Student Achievement in the Individually Prescribed Program in Mathematics at the Frank A. Berry School, Bethel, Conn. Graduate School of Education, Fairfield University, May 1968. | Grades 3-6 in school in Conn. - half in IPI and half not. | Stanford Achievement Test | The test was administered in October 1967 and April 1968 to both groups in computation, concepts and applications. Analysis of variance procedures were applied to median scores (grade equivalents). | No significant difference. |
| RBS - IPI Evaluation Summary 1967-68: Status Report Nov. 1968. | Grades 3-6 in five paired IPI and control schools - 1,700 students | Iowa Test of Basic Skills | This instrument was administered in the fall of 1967 and spring of 1968 in arithmetic concepts, problem solving, on an ungraded-untimed basis. The sections on reading comprehension and vocabulary were also given. The total raw score from 'test grades' 3, 5, and 7 were analyzed using MANOVA. | <ul style="list-style-type: none"> - No statistically significant difference between IPI and control schools in math achievement. - Girls did better than boys. - No statistically significant difference between IPI and control schools in the dispersion of math achievement scores. |
| IPI Placement tests | | | The IPI placement tests were administered in the fall of 1967 and the spring of 1968. MANOVA processing was used. | <ul style="list-style-type: none"> - IPI schools started lower in three of four grades, gained more, and ended higher than control schools for all four grades. - A significant difference in the dispersion of placement scores, greater than .01, occurred in the IPI schools both pre- and post-. |
| An arithmetic reasoning test which is part of the National Longitudinal Study of Mathematics Abilities. | | | A fifteen-item multiple-choice test consisting of math problems for which student responded with process to be used. | Extreme non-normality (skewed to the high end - upper limit too low) of the untimed scores led to no processing. |

PUPIL SIDE EFFECTS

| AUTHOR, TITLE & DATE | POPULATION | INSTRUMENTS | DESCRIPTION | RESULTS |
|---|--|--|---|--|
| Bialeck and Castro - A Second Year Evaluation of Individually Prescribed Instruction (IPI). Monterey, California, Nov. 1968. | Grades 4-6 in four IPI and four control schools in Monterey area - three IPI schools had math and one had reading. | Bialeck-made paper and pencil questionnaire. | The percentage of responses by item is reported by school. | MATH: <ul style="list-style-type: none"> - IPI pupils choose arithmetic as one of their two favorite subjects more than control pupils. - Low ability students find IPI most attractive. - More IPI pupils believe they are 'learning about as much as I can right now' than control pupils. In other words, pupils do recognize this feature in IPI. - IPI pupils prefer working by themselves more than control pupils. READING: <ul style="list-style-type: none"> - Control pupils choose reading as one of their two favorite subjects more than IPI pupils. |
| Elk Grove Illinois School District with the cooperation of Dr. Robert Stake, Univ. of Illinois. - Individually Pre- scribed Instruction: A Study of Independent Behavior. Unpublished report, Feb. 1968. | <ul style="list-style-type: none"> - Gifted pupils (+120 IQ) in two schools in Elk Grove, Illinois school district and two control schools. - All pupils in two IPI and two control schools - Parents of pupils | <ul style="list-style-type: none"> - An independence scale was developed from the results of a teachers' survey. - An attitude questionnaire was developed regarding math and reading in general and IPI math and reading. - Questionnaire for parents regarding the IPI program. | Three interviews were held with each student at intervals of six weeks starting in January. | <ul style="list-style-type: none"> - To the pupils, IPI made math more enjoyable. - Pupils do feel competitive. - Tests elicit ambivalence: an enjoyment over the end of work or beginning of new material coupled with anxiety over finding out possible failure. <ul style="list-style-type: none"> - Gifted IPI students demonstrate more independent positive actions than gifted non-IPI students. - IPI students indicate slightly more positive attitudes toward reading and math than do non-IPI children. - IPI students showed more favorable attitudes toward IPI reading and IPI math than general reading and math. - Parents of children in IPI generally have positive attitudes toward the program. |

PUPIL SIDE EFFECTS (Continued)

| Weinberger - Individually Prescribed Instruction: Results of 1968-69 Reading Prescription Analysis | Grades 1-6 in seven demonstration schools | Reading prescription sheet | Data taken from prescription deals with scores, use of materials and techniques, time utilized, sequence of prescription. | In progress. |
| Weinberger - Individually Prescribed Instruction: Results of 1969 Teacher Opinionnaire | 72 teachers in seven demonstration schools | Teacher opinionnaire concerning Individually Prescribed Instruction | Questions pertain to advantages, disadvantages, and problems with IPI, opinions about procedures and organization. | In progress |
| | 71 teachers in seven demonstration schools | Teacher information concerning future development in Individually Prescribed Instruction | Questions deal with continuous training, teacher participation in curriculum development, likes and dislikes in reading, science, and spelling. | In progress. |
| Weinberger and Scharf - Individually Prescribed Instruction: Results of 1969 Pupil Questionnaire, 'What Do You Think' | Pupils in grades 4, 5, 6 in five demonstration schools Pupils in grades 4, 5, 6 in five control schools | 'What Do You Think' | Instrument in three parts asked questions about attitudes toward school and specific subjects. IPI pupils were given five extra questions specific to IPI. The three parts of the instrument consisted of: 1) open-ended questions, 2) a semantic differential, and 3) multiple-choice questions. | In progress. |

PART III.

ANNOTATED BIBLIOGRAPHY

ANNOTATED BIBLIOGRAPHY

A constant problem at RBS has been one of developing the most effective lines of communication in order to share our work to date with the variety of audiences and requests received. Some people want to know all we know both verbally and in print; others are satisfied with brief generalizations.

The volume of mail for requests either in response to letters, or by furnishing written reports has reached a proportion of major concern to RBS. Both the time and cost have caused RBS to attempt a new mode of sharing.

Part III presents the major writings conducted about IPI since 1966. Several earlier references are included since the descriptions provide a valid link to the work of RBS-LRDC to date.

In addition to the annotation and index RBS is making provisions to handle all prior studies on a microfilming basis, at cost, thus eliminating tons of paper associated with studies to date. Arrangements are also being conducted to make all studies and data available through the ERIC (Educational Resources Information Center) System in the Office of Education, thus affording greater sharing and use. Meanwhile, serious researchers are invited to visit the RBS headquarters and use the studies in our library.

Future studies will be issued as technical papers in limited quantity and then placed on the microfilming system. Hopefully, the above method will provide faster access in reporting and also reduce the time and cost factor for RBS.

BIBLIOGRAPHY

Beck, Isabel L. and Bolvin, John O. *A Model for Non-Gradedness: The Reading Program for Individually Prescribed Instruction, Part III of a Symposium: Language Arts in the Non-Graded Schools*. Elementary English, XLVI:2, February 1969.

Succinct description of the IPI model for individualization. The article includes a selected linguistic approach to reading and its four stages: 1) pre-reading; 2) decoding; 3) comprehensions on and skills development; and 4) independent reading. There is a brief discussion of: objectives, diagnostic instruments, materials, individual prescriptions, classroom management, and data collection.

Indexed under 4, 6a, 7b, 11, 17, 18a, 21.

Becker, James. *Discussion, Educational Technology: New Myths and Old Realities*. Harvard Educational Review, Vol. 38, No. 4, pp. 747-751, Fall 1968.

Response to an article in same issue by A. Oettinger. Discusses need for change in education by citing Newark, N.J. system as an example. Places blame for the present mess on "establishment" rather than on school administrators. States that educators are not the ones who make basic educational policy. Describes IPI as a strategy — a different view of the way teaching should be done. Rejects the idea that individualization of instruction must be synonymous with maximum freedom of activity for the pupil. States that IPI has never been billed as a panacea by LRDC or RBS.

Indexed under 5, 6a, 21

Becker, James W. *Incorporating the Products of Educational Development Into Practice*. Research for Better Schools, Inc. July 1969.

Trace; the development of IPI from program selection to actual practice. Provides criteria, a description of the model, the allocation of resources for educational development, and problems confronting the developer prior to institutional adoption.

Indexed under 5, 6, 10, 14, 19, 21, 22a, 22b.

Becker, James W. *Run Computer Run: A Critique*. Research for Better Schools, Inc., May 1968.

A paper prepared for the Conference on Information Tech-

nology and Secondary Education, Harvard University. The paper discusses social problems confronting innovations, a description of IPI as contrasted with individualization, and some premises for future consideration.

Indexed under 5, 6a, 6b, 21, and 22a.

Becker, James W. *Toward Automated Learning*. Research for Better Schools, Inc., February 1968.

A professional paper delivered at the American Educational Research Association in February, 1968. The paper traces the essential elements of IPI from the paper-pencil mode into expanding uses with the computer including instructional management and computer-assisted instruction.

Indexed under 6a, 6b, 7, 8, 21.

Bialek, Hilton M. and Perkins, Kristen. *A First Year Evaluation of Individually Prescribed Instruction (IPI) Programs in Four Schools in the Three-County Area*. Unpublished report, Project EDINN, George Washington University, Office of Sponsored Research, Monterey, California, August 1967.

One interesting finding is that IPI is easier to administer in some type of large group or multi-room complex rather than the self-contained classroom. It also seems that IPI effectiveness is highly dependent upon the availability and judicious assignment of adequate para-professional assistance. The report presents the results of a series of interviews with IPI teachers; an analysis of a questionnaire periodically administered to IPI and control students; an analysis of the effects of classroom communication patterns; a discussion of individualization based on IPI and conventional classroom assignments; and an analysis of progress based on both IPI and standardized test instruments.

Indexed under 9, 10, 11, 14, 15a, 15b, 15c, 16a, 16b, 17, 18a, 18b, 18c, 19a.

Bialek, Hilton M. and Castro, Barbara. *A Second Year Evaluation of Individually Prescribed Instruction (IPI)*. Monterey, California, November 1968.

Four IPI and four control schools were compared in three main areas: 1) student attitude toward school and school subjects; 2) teacher and classroom activity and interaction; 3) student achievement over the school year.

Results show: 1) that students clearly like IPI, and that the structure of the program is attractive to pupils at all ability levels, especially those of low ability; 2) 63% of all communication in IPI classes are initiated by the students (vs. 34% in non-IPI classes); and that 70% of all interactions in IPI classes are non-instructional in content (vs. 43% in non-IPI classes); the latter finding is in contradiction to the first year's observations; 3) achievement test results for math and reading are presented.

Indexed under 9, 10, 11, 14, 15b, 15c, 16a, 20.

Bolvin, John O. *Evaluating Teacher Functions*. Paper presented at the annual meeting of the American Educational Research Association, New York, February 1967. Reprinted as Working Paper 17, Learning Research and Development Center, University of Pittsburgh, February 1967.

Teacher prescription practices are described in this report and two patterns of prescribing which teachers exhibit are identified. Some data in tabular form is presented to show length and types of prescriptions written by individual Oakleaf teachers for selected mathematics units. Though a few summary statistics are indicated, the analysis seems to be largely subjective. One conclusion noted was that prescription practices seem to be limited by the curriculum materials and student information readily available to the teacher. Some changes in prescription practices are shown over a two-year period, 1965-66 to 1966-67.

Indexed under 4, 10, 13, 15b, 15d, 18a.

Bolvin, John O. *The Use of Field Data for Improving IPI Materials and Procedures*. Unpublished paper, Learning Research and Development Center, University of Pittsburgh, December 1968. (Paper presented at the annual meeting of the American Educational Research Association, Los Angeles, February 1969.)

The paper lists the sub-elements of the five major elements of the IPI plan: 1) a testing program; 2) prescription writing practices; 3) instructional materials and devices; 4) teacher classroom activities; 5) classroom management problems. It discusses the results of prescription data analysis, such as variability of prescriptions; the need for all present objectives in the math continuum; and problem areas in terms of lesson materials.

Indexed under 4, 7b, 9, 17, 18a, 18b, 19, 21.

Bolvin, John O. *Variability of Pupil Achievement in Mathematics*. Paper presented at the annual meeting of the American Educational Research Association, Chicago, February, 1966. Reprinted as Working Paper 1, Learning Research and Development Center, University of Pittsburgh, February 1966.

This study compares variability in achievement of Oakleaf pupils before and after the introduction of IPI. The results of pre- and post-testing with IPI Placement Tests are used, and the mean and standard deviation of units mastered is calculated for each grade. Variability for each grade with and without IPI is compared by matching grade one at the end of the school year with the grade two from the beginning of the year. All grades are equated on I.Q. In grades 1, 4, 5, and 6, the results of this comparison do not support the hypothesis that variability of achievement in individualized instruction is greater than in standard graded instruction. This may be due to lack of a good measure of rate of achievement in IPI. Variability before is also measured by the Metropolitan Achievement Test and shows a general increase with number of years in school.

Boozar, Robert F. *A Study of the Relationship Between IQ and Units Mastered Per Year, Mathematics 1967-68*. Unpublished paper, Learning Research and Development Center, University of Pittsburgh, July 1968.

Data is presented which indicates a slight relationship between IQ and one measure of rate at Oakleaf for 1967-68.

Indexed under 4, 10, 13, 15a, 15d.

Boozar, Robert F. *An Overview of a Validation Study of the Sequencing Nature of Instructional Objectives*. Unpublished paper, University of Pittsburgh, June 1968.

This is a proposal for a study of whether the objectives in each IPI unit are scaled in the Guttman sense. The proposed application to IPI pretests of Lingoes' program for multiple scalogram analysis is outlined. Hypotheses concerning the curriculum to be tested by the study are stated.

Indexed under 4, 7a, 9, 10, 13, 15b.

Boozar, Robert F. *Evaluation of the Variability Among Students in Total Number of Units Mastered Per Year*. Unpublished paper, Learning Research and Development Center, University of Pittsburgh, Summer 1968.

This paper provides variability data for each grade at Oakleaf for 1967-68 in both math and reading.

Indexed under 4, 10, 11, 13, 15a.

Coleman, William A. *As Fast as Your Brain Knows How*. Parade Magazine, September 1968.

Article discusses the enthusiasm with which children, teachers, parents, and the Office of Education view IPI. Two case studies of fifth grade transfers to Oakleaf are used as illustration.

Indexed under 6a, 13, 17.

Cox, Richard C. *Item Selection Techniques and Evaluation of Instructional Objectives*. Journal of Education Measurement 2:18, 185, 1965. Reprint 4, Learning Research and Development Center, University of Pittsburgh, 1965.

The use of statistical item difficulty and discrimination indices as criteria for selecting test items is shown to alter the content of the test according to Bloom's *Taxonomy of Educational Objectives*. This implies that the test may not be a valid measure of intended objectives after statistical item selection techniques are applied.

Indexed under 4, 7a.

Cox, R. C. and Boston, M. Elizabeth. *Diagnosis of Pupil Achievement in the Individually Prescribed Instruction Project*. Working Paper 15, Learning Research and Development Center, University of Pittsburgh, November 1967.

This is a description of the criterion-referenced diagnostic instruments designed for IPI, their purposes, and how they are used in the instructional process. Sample tests are included.

Indexed under 4, 6a, 7b, 10, 11, 12.

Cox, R. C., et al. *A Description and Interim Evaluation Report Concerning the First Two Years of the Individually Prescribed Instruction Project*. Learning Research and Development Center, University of Pittsburgh, December 1966.

This is the first comprehensive unpublished evaluation report on IPI containing a description of school variables, IPI in the Oakleaf School, pupil placement, pupil advancement, retention of learned materials, comparison studies, prescription writing, non-cognitive variables, and an extensive bibliography.

Indexed under 4, 6a, 7b, 9, 10, 11, 12, 13, 15a, 15b, 15c, 15d, 16a, 16b, 17, 18a, 18b, 18c, 19c, 20.

Cox, R. C. and Graham, G. T. *The Development of a Sequentially Scaled Achievement Test*. Journal of Educational Measurement, 3:2, Summer, 1966. Reprint 18, Learning Research and Development Center, University of Pittsburgh, 1966.

A preliminary study of the feasibility of applying Guttman scalogram analysis in achievement testing for individualized instruction is reported. The test developed is based on selected objectives from the IPI math curriculum.

Indexed under 4, 7a, 10.

Cox, R. C. and Sterrett, Barbara G. *The Application of a Model for Deriving More Meaning From Standardized Test Results*. Paper presented at the annual meeting of the National Council on Measurement in Education, Chicago, February 1968. Reprinted as Working Paper 42, Learning Research and Development Center, University of Pittsburgh, 1968.

The model provides a procedure for using a standardized achievement test as a criterion-referenced measure, essentially giving each pupil two scores—one on material he has studied and should be expected to know, and the other on material he is not expected to know. Data on IPI pupils is used to exemplify the model.

Indexed under 4, 7a, 10, 15b, 15c.

Deep, Donald. *Changing Role of Teachers*. Pennsylvania School Journal, 116:7, March 1968.

A description of Teacher functions and activities in IPI.

Indexed under 6a, 13, 18a, 18b.

Deno, Stanley R. and Jenkins, Joseph R. *Evaluating Planned Curriculum Objectives*. Research for Better Schools, Inc., 1967.

Thirteen elementary and secondary teachers analyzed a sampling of instructional objectives contained in the IPI Mathematics Continuum. Objectives were analyzed according to context, specificity and criterion as advocated by leading authorities on behavioral objectives. Findings indicated that IPI mathematics objectives are a more general statement of expected performance level than that specified by the often restrictive and ambiguous recommendations of adherents to the components of context, specificity and criterion.

Dudley, Charles J., Smith, Keith F., and Pellegrin, Roland J. *The Decision-making Structure of Schools*. Unpublished paper, Center for the Advanced Study of Educational Administration, University of Oregon. (Paper presented at the annual meeting of the American Educational Research Association, Los Angeles, February 1969.)

The study deals with perception of the authority structures

held by teachers, principals, and other personnel. The types of schools in the study were: Multi-Unit Schools and their controls (Wisconsin); IPI Schools and their controls; and six schools in one State of Washington school district.

The results showed little variability among the control schools where the principal plays a strong consultative role, and among IPI schools, where the IPI coordinator plays a prescriptive role. The Multi-Unit Schools showed much variability of authority structure, but all showed a strong trend toward group decision-making.

Indexed under 14, 18b, 19b.

Eidell, Terry L., Little, Ronald, and Thorlacius, Jon. *Uniformity and Variability in the Organizational Characteristics of Elementary Schools*. Unpublished paper, Center for the Advanced Study of Educational Administration, University of Oregon. (Paper presented at the annual meeting of the American Educational Research Association, Los Angeles, February 1969.)

Four instruments measuring: 1) job satisfaction, 2) pupil control orientation; 3) reference group orientation, and 4) leadership of school principals were administered to a sample of teachers from four different types of schools — 3 IPI schools; 3 Control Schools; 3 Multi-unit Schools for Project Models: Wisconsin; and 3 Multi-unit Control Schools for Project Models. Results are not clear, and are explained in terms of regional differences.

Elk Grove Illinois School District with the cooperation of Dr. Robert Stake, University of Illinois. *Individually Prescribed Instruction: A Study of Independent Behavior*. Unpublished report, February 1968.

The study was undertaken to evaluate the effect of IPI on the independent behavior of gifted (+120 I.Q.) children in two schools of the District. Two hypotheses also dealt with the utilization of time and positive attitudes toward school.

Indexed under 4, 5, 6a, 9, 10, 11, 14, 16a, 16b, 16c, 17, 18a, 18b.

Fawcett, Temple. *A Manual for Teacher Aides in IPI Mathematics*. Research for Better Schools, Inc. 1969.

The purpose of this comprehensive Aide's manual is to provide general information about individualized instruction and the IPI math program; to familiarize aides with the materials used in the program; give aides practice in the kinds of tasks they will be performing using IPI record sheets; and 4) to offer suggestions to facilitate the job.

A filmstrip and a record "Aiding IPI" is also included.

Indexed under 7b, 10, 18a, 19a.

Fisher, Jack R. *An Investigation of Three Approaches to the Teaching of Mathematics in the Elementary School*. Unpublished doctoral dissertation, University of Pittsburgh, 1967.

Procedural differences between standard classroom instruction, programmed instruction, and IPI are described. Differences in student achievement in the three programs as measured by standardized tests are negligible.

Indexed under 6a, 6b, 10, 15c, 17, 18a, 18b, 19a.

Fisher, Jack R. *Audio-Visual Sources for IPI Mathematics*. Research for Better Schools, Inc., 1969.

A complete source on films, transparencies, filmstrips and film loops correlated to the IPI math objectives of 68-69. Contains titles, specific content, and the commercial source.

Indexed under 5, 10, 21.

Friends School, Wilmington, Delaware. *Individually Prescribed Instruction in the Friends School, 1967-68*.

A descriptive paper discussing the history and philosophy of individualization at Friends School, reasons for the selection of IPI, faculty preparation, and the essential elements of IPI.

Indexed under 6a, 14, 18c.

Gallagher, Peter K. *The Evaluation of Student Achievement in the Individually Prescribed Program in Mathematics at the Frank A. Berry School, Bethel, Conn.* Graduate School of Education, Fairfield University, May 1968.

The study tested the following hypotheses:

1. There will be significant differences in self-reliance,

personal worth and school relations of the pupils engaged in IPI as compared to those in control classes. (Measure: California Test of Personality.) Results: not significant.

2. There will be significant differences in attitude towards Arithmetic of the IPI pupils as compared to the control classes. (Measure: Student Attitude Test toward Arithmetic.) Results: significant.

3. The arithmetic achievement will be higher in the IPI classes than in the non-IPI classes. (Measure: Stanford Achievement Test.) Results: not significant.

4. There will be some statistical difference in the learning progress of those children classified as culturally disadvantaged in the IPI classes. (Measure: Stanford Achievement Test.) Results: not significant.

Humphrey, Jan. *Self-concept of Ability in IPI and Non-IPI Students*. Unpublished paper, Learning Research and Development Center, University of Pittsburgh, July 1968.

The purpose of this study was to test the hypothesis that students who had been in IPI should have stronger self-

concepts of ability as learners than those in regular classes. A questionnaire was administered to 791 seventh grade students. The results did not support the hypothesis. IPI girls showed a decrease in self-concept of ability when they moved from IPI into a regular seventh grade program.

Indexed under 4, 13, 16a, 20.

Humphrey, Jan. *Specific Subject Self-concept in IPI and Non-IPI Student*. Unpublished paper, Learning Research and Development Center, University of Pittsburgh, July 1968.

Four hundred eighty-eight 7th grade students (including 21 who had had IPI in the 6th grade) responded to a questionnaire containing items on self-concept of abilities in Math, English, Social Studies and Science, and on their liking of these subjects. Results supported a previous finding that as one's self-concept of ability increases, there is a greater tendency for one to like the current course. The IPI subjects, however, departed from this tendency by preferring their 6th grade IPI math course (regardless of math self-concept). This did not happen with reading and science, however.

Indexed under 4, 16a, 20.

Individually Prescribed Instruction. Research for Better Schools, Inc., 1969.

Distributable-type brochure includes a brief history of individualization; the background of IPI — its distinguishing fundamentals and diagnostic instruments; the role of RBS in disseminating, training and evaluating; discussion of the math and reading curricula; general-type questions and answers.

Indexed under 4, 5, 6a, 7b, 10, 11, 21.

Lindvall, C. M. *Criteria for Stating IPI Objectives*. Unpublished paper, Learning Research and Development Center, University of Pittsburgh, July 1968.

States requirements for developing sequences of objectives. Presents suggestions for defining the structure within units (applicable to different subject areas). Defines and illustrates IPI units (i.e. a limited number of "unified" objectives); discusses the need and form of an over-all goal for a unit in terms of evaluation and pupil performance.

Indexed under 4, 21.

Lindvall, C. M. *Instructional Design*. Unpublished paper, Learning Research and Development Center, University of Pittsburgh, 1968.

Discusses the need for development and refinement of IPI curricula, as suggested by Robert Glaser in the NSSE Yearbook, *The Changing American School*, 1966, pp. 215-42, also LRDC Reprint 5 "The Design of Instruction."

The basic steps involved in this effort include: 1) analyzing the characteristics of subject-matter competence; 2) diagnosis of pre-instructional behavior; 3) carrying out the instructional process; and 4) measuring learning outcomes.

Indexed under 4, 21.

Lindvall, C. M. *Planning of Objectives, Learning Sequences and Units for IPI*. Learning Research and Development Center, University of Pittsburgh, 1968.

Develops criteria to be used in evaluating the quality of the form in which IPI objectives are stated. It is assumed that adherence to these will maximize the chance that any given objective will have the same exact meaning to all.

Indexed under 4, 21.

Lindvall, C. M. *The IPI Evaluation Program*. Unpublished paper, Learning Research and Development Center, University of Pittsburgh, December 1968. (Paper presented at the annual meeting of the American Association for the Advancement of Science, Dallas, December 1968.)

The paper discusses the formative evaluation of IPI as evaluation that provides feedback for indicating areas of operations in need of improvement. It includes examples of data collection, such as ACC reports of math dispersion; achievement by grade level on the IPI; and dispersion of Oakleaf students in reading and math.

The paper also includes a chart listing the basic components of IPI and how these should be realized in both the plan and operation of the program, and to the basic goals of the project.

Indexed under 9, 10, 11, 13, 15a, 15c.

Lindvall, C. M. and Bolvin, J. O. *Individually Prescribed*

Instruction: the Oakleaf Project. Working Paper 8, Learning Research and Development Center, University of Pittsburgh, February 1966.

This is a general descriptive report on Oakleaf IPI which includes assumptions underlying IPI, a brief description of instructional materials and procedures, purposes of the project, and some questions to guide the evaluation of the project.

Indexed under 4, 6a, 9, 10, 11, 12.

Lindvall, C. M. and Bolvin, J. O. *Programmed instruction in the Schools: An Application of Programming Principles in Individually Prescribed Instruction*. Programmed Instruction, Sixty-sixth Yearbook of the National Society for the Study of Education, Part II, University of Chicago Press, Chicago, 1967, pp. 217-254. Reprint 16, Learning Research and Development Center, University of Pittsburgh, 1967.

Principles for programming of instructional material are outlined and their use in the development of IPI described. Analogies between IPI and "programmed instruction" are drawn and IPI is presented as an example of how programming principles may be used in the schools without completely adopting programmed instruction.

Indexed under 6a, 6b.

Lindvall, C. M. and Bolvin, J. O. *The Preparation of Teachers for Individually Prescribed Instruction*. Unpublished paper, Learning Research and Development Center, University of Pittsburgh, February 1968. (Paper presented at the annual meeting of the American Educational Research Association, Chicago, February 1968.)

This paper represents a rationale of how teachers should be retrained for IPI. It relates some of the procedures used at an IPI summer workshop and procedures which might be used for in-service planning sessions.

Indexed under 4, 18c.

Lindvall, C. M. and Cox, R. C. *The Role of Evaluation in Programs for Individualized Instruction*. Educational Evaluation: New Roles, New Means, Sixty-eighth

Yearbook of the National Society for the Study of Education. University of Chicago Press, Chicago, 1969.

Evaluation is defined as 1) a procedure for gathering pupil data to use in planning and monitoring individual programs; and 2) a procedure for gathering and analyzing data in such a way that it leads to improvements in materials and in the instructional system.

IPI objectives and tests are discussed, along with other individualized learning programs, from Winnetka Plan (1925) to the Bucknell University Continuing Progress Plan, and AIR-Westinghouse Project Plan.

Indexed under 6a, 6b, 7b, 9, 15a, 15b.

Lindvall, C. M. and Cox, Richard C. *Some Notes on the Rationale and Plan for the Evaluation of the Individually Prescribed Project in the Development and Replication of IPI*. (Address delivered at the annual meeting of the American Educational Research Association, 1967.)

Cites six elements considered in the IPI evaluation plans and examples of procedures used and documents produced about each. The six major elements are: 1) the program plan; 2) the operating program; 3) the school context; 4) pupil behavior, including achievement measures; 5) teacher behavior; and 6) unplanned influences.

Indexed under 4, 9, 15a, 15b, 15c, 16b, 17, 18a, 18b.

Lindvall, C. M. and Cox, R. C. (with the collaboration of Bolvin, J. O.). *Evaluation as a Tool in Curriculum Development: the IPI Evaluation Program*. Unpublished draft, Learning Research and Development Center, University of Pittsburgh, July 1968.

This paper provides rationale for and description of the testing and evaluation programs for IPI at the Learning Research and Development Center. It is a draft of a paper to be published in the American Educational Research Association Monograph Series on Curriculum Evaluation.

Indexed under 4, 6a, 7b, 9.

Lindvall, C. M. and Nitko, Anthony. *Criterion-Referenced Testing and the Individualization of Instruction*. Un-

published paper, Learning Research and Development Center, University of Pittsburgh, October 1968.

Discusses the need for criterion (or content) referenced tests as opposed to norm-referenced tests to determine what specific things a pupil does or does not know. The author provides a rationale for the derivation of criterion-referenced and norm-referenced tests scores. A distinction is made between criterion-referenced tests, criterion-referenced *information* and criterion-referenced scores. It is the criterion-referenced *information* that is essential for instructional planning. IPI math is cited as an example of the use of criterion-referenced testing.

Indexed under 4, 7a, 7b.

Lindvall, C. M. and Nitko, Anthony. *Criterion-Referenced Testing and the Individualization of Instruction*. University of Pittsburgh, 1969.

IPI pre-tests which are criterion-referenced tests and yield criterion-referenced information. This information tells the teacher what pupils can and cannot do in skills within the unit. It provides a general picture of how IPI has attempted to employ criterion-referenced testing to make individualized instruction possible.

Indexed under 4, 7a, 7b.

Lindvall, C. M. and Yeager, J. S. *An Exploratory Investigation of Selected Measures of Rate of Learning*. Paper presented at the annual meeting at the American Educational Research Association, Chicago, February 1966. Reprinted as Working Paper 3, Learning Research and Development Center, University of Pittsburgh, February 1966.

In this study, the usefulness of three different measures of rate of learning in IPI were investigated, and some hypothetical correlates of rate were tested. The three rate measures were 1) units per year; 2) days worked in specific units; and 3) content mastered per day in specific units. Correlations were made between math rate and reading rate, between rate and IQ, and between rates in two different units.

Lipson, Joseph I. *A Suggested Approach to the Elementary School Science Curriculum*. Working Paper 43,

Learning Research and Development Center, University of Pittsburgh, May 1968.

Activities in the elementary school science should balance between relationships among verbal learning, laboratory experience, experiences in school, outside formal instruction, self-chosen activity and activity required by adult world. Stories of science, vocabulary of science and application of science should be included in content. A library-laboratory for investigations dictated by self-choosing is a must.

Lipson, Joseph I. *An Individualized Science Laboratory*. Science and Children, 4:4, December 1966. Reprint No. 17, Learning Research and Development Center, University of Pittsburgh, 1966.

This article is an illustrated description of the Oakleaf science program with some rationale throughout and a sample lesson script included.

Indexed under 4, 6a, 12, 13.

Lipson, Joseph I. *Individualized Instruction in Elementary Mathematics*. Research in Mathematics Education, National Council of Teachers of Mathematics, Washington, D. C., 1967. Reprint 22, Learning Research and Development Center, University of Pittsburgh, 1967.

A paper summarizing IPI objectives, materials, instructional procedures, achievement measures (standardized tests, number of units mastered, range of achievement, summer retention, rate and I.Q. correlation, and transfer), student motivation and implications.

Indexed under 4, 7b, 10, 13, 15a, 15b, 15c, 15d, 16a, 17, 19a.

Lipson, Joseph I. *Individualization of Science Instruction in the Elementary School Laboratory*. Draft of a speech delivered at the annual meeting of the National Science Teachers Association, Detroit, March 1967. Learning Research and Development Center, University of Pittsburgh, 1967.

A descriptive paper dealing with: a typical science class at Oakleaf, objectives of the program, a description of the aims

of education, and the place of science in the curriculum, LRDC programs in individualization, and evaluative efforts.

Indexed under 4, 6a, 6b, 12, 13, 17, 18a, 18b.

Lipson, Joseph I. *Transfer and Generalization in Individually Prescribed Instruction*. Paper presented at the annual meeting of the American Educational Research Association, Chicago, February 1966. Reprinted as Working Paper 5, Learning Research and Development Center, University of Pittsburgh, February 1966.

This paper defines the terms "generalization" and "transfer" and presents a model for identifying instances of transfer in IPI. Tables and graphs are presented showing the frequency of occurrence of transfer instances identified by the model in each grade and in each unit of the IPI curriculum. The data is suggested as an aid to help lesson writers revise the curriculum objectives and materials to promote transfer and generalization.

Lipson, J. I., Cohen, H. B. and Glaser, R. *The Development of an Elementary School Mathematics Curriculum for Individualized Instruction*. Working Paper 7, Learning Research and Development Center, University of Pittsburgh, 1966.

A description of the first IPI math curriculum and a discussion of the rationale for its development is presented and supported by related literature.

Indexed under 4, 6a, 10, 13.

Magoon, Jon and Cox, R. C. *The Principal Component Structure of Multiple Guttman Scales*. Paper delivered at a joint session of the National Council on Measurement in Education and the American Educational Research Association, Chicago, Illinois, February 1968. Reprinted as Working Paper 41, Learning Research and Development Center, University of Pittsburgh, 1968.

This study compares the results of applying two different analysis procedures to theoretical test data—one is the metric

technique of factor analysis, the other the nonmetric multiple scalogram analysis. It was found that under certain conditions of score distribution, reproducibility, and independence of scales, the Guttman scales could be represented by single principal components. Results may be significant for criterion-referenced testing.

Research for Better Schools, Inc. *Administrative Training Program for IPI Mathematics*. 1969.

The purpose of the Administrative Training Program (ATP) is to provide new IPI administrators with the necessary information and materials for the successful implementation of the IPI Math program in their schools. The materials described below are used in conjunction with on-site training at an existing IPI school. Emphasis centered on the role of the principal as the instructional leader of the IPI program in his school. The contents of the training package include:

1. Information about the ATP and evaluation forms
2. Discussion of *Teaching in IPI* (teacher training program)
3. Administering in IPI
4. Aiding IPI (including materials ordering procedures, training of professional and paraprofessional staff)
5. Evaluating IPI (appraisal activities for 1969-1970)
6. IPI reference bibliography

Scanlon, Robert G. *A Summary of Training Activities, IPI, June 1966-January 1968.* Research for Better Schools, Inc., 1969.

A description of teacher institutes, as well as the development of training materials and strategies used with IPI teachers and administrators.

Indexed under 4, 5, 18c.

Scanlon, Robert G. *Factors Associated With a Program for Encouraging Self-Initiated Activities by Fifth and Sixth Grade Students in a Selected Elementary School Emphasizing Individualized Instruction.* Unpublished doctoral dissertation, University of Pittsburgh, 1966.

The study included the use of three treatments in the math classes: 1) was designed to create awareness and use of a wide range of supplementary materials; 2) provided opportunities to explore special interest areas; and 3) was designed to capitalize on special interests and to structure opportunities for teachers and students to praise exceptional work. The treatments, introduced one per month, continued throughout the four-month research study. Three instruments were used to measure: 1) self-initiated behavior; 2) student interest; and 3) peer-group evaluation of initiation.

The major findings were that self-initiation can be improved by providing special techniques during class period; that there

is little relation between self-initiation and I.Q., achievement or sex of student.

Simon, Anita, Boyer, E. Gil and Buccino, Ernest. *A Comparison of Teacher-Pupil Verbal Interaction in IPI and Non-IPI Schools. Research for Better Schools, November 1969.*

The purposes of the study were to test the following hypotheses: 1) that IPI teachers do not differ significantly from non-IPI teachers in their verbal behavior on selected variables as measured by the Flanders 10 Category Interaction Analysis System; 2) that IPI pupils do not differ significantly from non-IPI pupils in their verbal behavior as measured by the Flanders System. Data for this study was collected from five IPI schools and their controls.

Results: In general, there were only small differences between IPI and non-IPI schools. The statistical differences that did show were few and in a direction opposite to what theory in this field suggests improves pupil outputs. Thus, it is reasonable to conclude that any improvements in IPI pupil outcomes over the control school pupil outcomes is not a function of the teacher verbal interaction measured by this study.

Unks, Nancy J. *A Plan for Evaluating the IPI Testing Program*. Unpublished paper, Research for Better Schools, Inc., 1967. (Paper presented at the meeting of the Pennsylvania Educational Research Association, University of Pittsburgh, November 1967.)

A rationale and overview of a plan for evaluating the IPI testing sub-program is presented with an outline of the plan based on Lindvall's evaluation paradigm.

Indexed under 4, 7b, 9, 13c.

Unks, Nancy J. *An Investigation of Validity of Reliability Concepts for Criterion-Referenced Measurement*. Unpublished Master's Thesis, University of Pittsburgh, 1969.

A logical investigation of the applicability of test evaluation procedures to criterion-referenced measurement was conducted. The appropriateness of traditional procedures developed on norm-referenced tests was found to be limited by the purposes of criterion-referenced measurement in individualized instructional settings. Selective applications of these methods are recommended. Some new procedures and

concepts for item analysis, validity, and reliability are suggested to supplement the older techniques and to provide test evaluation procedures which are more congruous with the aims of measurement for individualized instruction.

Indexed under 7a.

Unks, Nancy J. *Basic System Data Reports, 1967-1968*. Research for Better Schools, Inc., April 1969.

A report is given on the contents of 10 types of printouts concerning the use of IPI math materials during the 1967-68 school year. For each type of printout, the data contained within is listed and the frequency of its use is noted (by month, once yearly, etc.). A table at the end summarizes the printouts available and describes the raw data which is also available on magnetic tapes.

Indexed under 5, 9, 10, 15b.

Unks, Nancy J. *Individually Prescribed Instruction: A Proposed Pilot Study of Selected Intellectual Factors*. Research for Better Schools, Inc., December 1968.

Paper includes background discussion on the need for a study of creative problem solving in IPI to support or refute critical accusations; a rationale for the selection of feasible and operational measures of creativity; the experimental design for the IPI study; and a description of the six tests in the battery.

Indexed under 5, 8.

Unks, Nancy J. *I.P.I. Mathematics: A Report on the Results of 1967-68 Prescription Data Analysis*. Research for Better Schools, Inc., May 1969.

Prescription data based on 4,685 pupils in 19 I.P.I. schools was summarized, including such items as pages used, test scores, and days spent in each skill. Printouts of the summaries yield information relating to five aspects of I.P.I.:

1. initial pupil placement
2. gross pupil progress
3. sequencing and difficulty of instructional units
4. sequencing and difficulty of skills
5. test unreliability and non-validity

The results in each of these five areas were as follows:
1. Model placement levels for each grade were determined as follows:

| | |
|---------|---------------|
| grade 1 | level B |
| grade 2 | level C |
| grade 3 | level C and D |
| grade 4 | level D |
| grade 5 | level D and E |
| grade 6 | level E |

Percentages of pupils who could not be placed at any level decreased from grade 1 to 6.

2. Over all grades, the average number of units completed in one year was 12.5 (about one level). Average units completed in a year increased from grade 1 to 6.

In all grades, the level at which most work is done at the end of the year is one higher than at the beginning.

3. Eighteen out of 70 units are identified as easy by pretest data; 26 are difficult. Most difficult skills are identified within the problem units by average pretest scores.

Twenty-five units are identified as difficult by post-test data.

Altogether 56 units are difficult by pre-test and/or posttest data or need skills resequenced.

4. Forty-eight out of 372 skills are identified as easy by pretest data; 57 by CET data.

Fourteen are difficult according to pretest data; 68 according to CET data; 32 by use of instructional techniques.

For 55 units the orders of skills from easy to difficult according to pretest data are listed.

5. Difficult units and skills are indicators of possible test non-validity or unreliability.

Thirty-three units found easy by pretest data at the beginning of the year (as opposed to only 18 later in the year) may indicate misplacement of pupils and non-validity of placement tests.

Weinberger, JoAnn. *Report of Comparison between Iowa Test of Basic Skills—Form 4 and IPI Continuum.* Research for Better Schools, Inc., November 1968.

Comparison of ITBS with the IPI continuum and placement tests by two independent raters (reconciled by a third when necessary). Results showed that very few ITBS items were in the IPI continuum. Of the 418 skills in the IPI math

continuum, 26% were tested by the ITBS. Of the 147 skills on the IPI placement test, 27.9% were tested on the ITBS. Indexed under 5, 9, 10, 15b, 15c, 20.

Weinberger, JoAnn. *Degree of Implementation of IPI 1967-68 Summary Report.* Research for Better Schools, 1968.

The degree of implementation of IPI was assessed for each teacher in the nineteen schools involved in IPI mathematics during 1967-68. The criterion questions on which the study was based were selected for their importance in the teacher's adherence to the mastery criterion, the correct administration of tests, and variations in prescription writing.

Indexed under 5, 9, 10, 14, 18a.

Weinberger, JoAnn. *Temporal Retention Study on IPI Mathematics.* Unpublished paper, Research for Better Schools, Inc., April 1969.

The purpose of this study was to determine the necessity of placement testing pupils at the beginning of each school year. Data were extracted from the Spring and Fall placement profiles of 1,231 pupils in four IPI schools; and the number of units gained or lost over the summer were calculated by grade level and area in the continuum. The results showed no overall difference, except that certain units were noted for their dominance of gains or losses in particular grades. It was concluded that it is not necessary to placement test pupils each September.

Indexed under 5, 7b, 10, 15b, 15d.

Weinberger, JoAnn. *The Use of Data in Monitoring School Implementation of Individually Prescribed Instruction.* Unpublished paper, Research for Better Schools, Inc. 1969. (Paper presented at the annual meeting of the American Educational Research Association, Los Angeles, 1969.)

The monitoring and evaluation system has been devised to meet the following purposes: 1) to assist school personnel by providing feedback on their use of the system, along with ways in which they can improve; 2) to appraise the training materials by determining if the goals and elements of IPI are upheld in actual field settings; 3) to provide the Learning Research and Development Center and Research for Better Schools with the developmental information needed for refining and improving the IPI system.

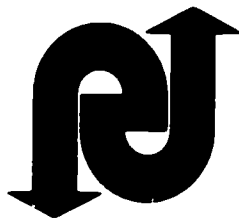

Three major instruments provide the source of information: 1) the Degree of Implementation Report (criteria for utilizing IPI procedures); 2) Report of Student Progress (placement and progress data); and 3) school visitation monitor reports.

Indexed under 5, 7b, 9, 10, 14, 15a, 18a, 19d.

Yeager, J. L. and Lindvall, C. M. *Evaluating an Instructional Innovation Through the Observation of Pupil Activities.* The High School Journal, 51:248-253, 1968. Reprint 34, Learning Research and Development Center, University of Pittsburgh, 1968.

Description of major categories used in an observation schedule for evaluating pupil classroom activities in IPI is presented. Sample data is given comparing Oakleaf with another school implementing IPI.

Indexed under 4, 6a, 9, 10, 13, 14, 17, 18b, 19a.
